

# KITE SAFETY

Be safe and courteous when you fly your kite:

Look UP into the sky for hazards like power lines, trees, buildings and nearby roads.

Look DOWN on the ground for tripping hazards like holes, glass, wire and hidden things.

Look ALL AROUND for people near you and make sure your kite line won't hurt them.

Look where you are going as you move around the field.

Keep a safe and respectful distance from other kites, and their kites in the sky. Fly in your "lane".

Make sure you can see your kite in the sky and it can see you.

Be aware of the weather - don't fly in rain or lightning.

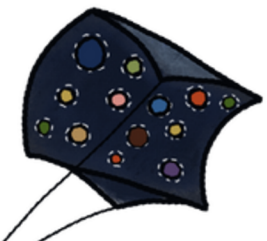

Only fly in winds that match your ability and kite design.

Use the handle to bring your kite back in. Don't touch the line - it will be very sharp.

Your kite can be replaced. You cannot. Don't take risks to rescue your kite.

## Have Fun! Be Safe!
